Benefits

Keep walls and floors dry

A "hands under" hand dryer can leave water on a wall or provide a small pooling on the floor. This blade style hand dryer catches the water in an easy to empty tray like its "hands in" equivalents, leaving walls and floors completely dry.

Highly suitable for an accessibility washroom

Wet floors can be a hazard for anyone, but especially for those with limited mobility. This unit stops this from happening. Wheelchair users can safely use this unit without the fear of water splashing back on them. A feature also useful for small children. Loud noises can be an issue for children and users of accessibility toilets. The low noise airflow and motor provide a tolerable sound level for all users.

Intelligent heating system

This unit thinks for itself, automatically keeping the temperature of the airflow comfortable, with no need for someone to remember to do it. If the rooms cold it will add heat. If it's a warm day it doesn't. This makes sure you do not waste any energy unnecessary, yet enhance the user experience whatever the time of year.

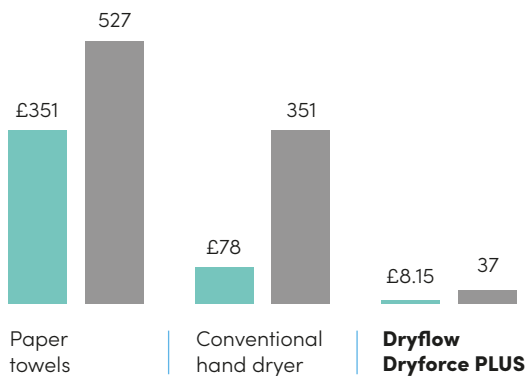

Purified clean air protects the motor

A filter is included, which rids the air taken into the unit of dust and dirt. It cleans the air being blown over the hands and protects the motor of debris, preserving its life, giving years of service.

Low running costs and environmentally friendly

Your bills will be significantly reduced when compared to a conventional hand dryer or the constant replenishment of paper towels. The environment will also benefit.

Annual cost and carbon production (Kg/CO²) for an office of 20 people*
